SUMMARY

Backend developer working in software since 2017. I build Node.js and TypeScript services for APIs, integrations, transaction processing and asynchronous jobs. My experience includes PostgreSQL, Redis and RabbitMQ, defining API contracts across teams and owning service integrations. Additional experience includes React, developing and testing Rust programs for Solana, and leading a small frontend team.

CORE SKILLS

Core Stack JavaScript · TypeScript · Node.js · NestJS · Express · PostgreSQL · Redis · RabbitMQ

Additional React · Rust · Solana

EXPERIENCE

Written.app

Nov 2025 – Present

Node.js / Web3 Developer

I develop and maintain a Node.js service that connects the product's Ruby backend to Solana through an HTTP API. The backend prepares transactions, tracks their execution and confirmation, and records payment states and statuses in PostgreSQL using Prisma. I implement the preparation, validation and creation of Solana accounts, and work with the Ruby team on API contracts, retries and error handling. The service also supports compressed NFT minting and verification.

Node.js NestJS Jest Mocha web3.js PostgreSQL Prisma

ToTheMoon

Apr 2025 – Nov 2025

Full-Stack / Solana Developer

I worked on the Node.js backend for a token launch and streaming platform. My responsibilities included WebRTC functionality using Janus, integrations with Twitch and YouTube, and WebSocket communication with the client. I designed relational database schemas in PostgreSQL and worked with Prisma and Redis. I also developed a TypeScript SDK with a shared interface for Raydium, Pump.fun, Moonshot, Orca and Jupiter, built the token launch onboarding interface, and wrote Rust smart contracts for launches, liquidity locking, whitelists and migration to Raydium.

Node.js NestJS Jest Mocha web3.js PostgreSQL Prisma WebSocket Redis WebRTC Janus

BullPerks

Aug 2024 – Apr 2025

Node.js / Solana Developer

I developed and maintained a Node.js backend in a microservice architecture, integrating the product with Solana through wallet interactions, transaction processing and on-chain data synchronisation. I worked with MongoDB through Mongoose and with Redis. I also developed and tested the Rust programs behind these flows, implementing signature verification and replay protection for on-chain actions.

Node.js MongoDB Mongoose Redis Rust Solana

frakt.xyz

May 2023 – Aug 2024

Node.js Developer → Full-Stack Web3

I worked on the Node.js backend for a React application, developing its GraphQL API and BFF integration with the main backend. My responsibilities also included the React client and tests for Solana programs.

Node.js GraphQL React Solana

xfamily.io

Aug 2021 – Apr 2023

Node.js Backend Developer

I developed the backend for a crypto-swap portal, building APIs and integrations with external exchange services and smart contracts. I designed the relational database schema in PostgreSQL, used RabbitMQ for asynchronous jobs and Redis for caching, and wrote service tests with Jest.

Ownix.com

Mar 2020 – Aug 2021

Node.js Developer

I developed Node.js backend services for an NFT auction product in a microservice architecture. The work included relational data storage in PostgreSQL, caching with Redis, third-party integrations and realtime bidding updates over WebSocket and SSE.

P2P.org

Aug 2019 – Mar 2020

Front-End Developer

I developed React and Vue interfaces, managed application state with Redux and integrated the frontend with backend APIs.

React | Vue | Redux

Zensoft.io

Dec 2017 – Aug 2019

Front-End Developer → Team Lead

I developed single-page applications and began working on Node.js backend functionality. Later, I led a small frontend team, taking responsibility for planning, architecture decisions and code reviews.

JavaScript | Node.js | SPA

Svetofor.info

2017

Front-End Developer

I built website interfaces from designs, implementing layouts and interactive features with HTML, CSS and JavaScript.
